SWE ZIN LINN

SENIOR ANDROID DEVELOPER

Yangon, Myanmar | +959975601261 | swezinlinn1@gmail.com
swezinlinn.github.io/my-portfolio | linkedin.com/in/swe-zin-linn | github.com/swezinlinn

PROFESSIONAL SUMMARY

Senior Android Developer with nine years of experience shipping native apps in Kotlin and Java. I own the OneCash AI chat SDK — a Jetpack Compose assistant that streams LLM responses over WebSocket and stays usable offline — and previously led generative AI video creation on myFirst children's cameras, in a codebase where on-device ML and LLM-backed features ship to real users. Earlier I led the re-architecture of Wave Money, Myanmar's leading FinTech app, to a 99.5% crash-free rate for 5M users. I am equally comfortable owning a feature end-to-end, modularising a large codebase and mentoring the engineers around me.

CORE SKILLS

AI & ML	LLM chat assistants (streaming over WebSocket), OpenAI Realtime API, speech-to-text with server VAD, generative video / image / story pipelines, Google ML Kit (face detection, image labeling), TensorFlow Lite (MobileFaceNet on-device embeddings)
Languages	Kotlin, Java, JavaScript, PHP, Python
Android	Jetpack Compose, Android Jetpack, Coroutines & Flow, WorkManager, CameraX, Media3/ExoPlayer, Leanback, Espresso, Android SDK, Gradle (Kotlin DSL)
Architecture	MVVM, MVP, Clean Architecture, multi-module / domain-based modularization, SDK and AAR design, Super App (mini-apps)
Data & APIs	Room, SQLite, Realm, Retrofit, OkHttp (REST & WebSocket), Firebase (Firestore, Storage, Auth, Remote Config, Crashlytics), Postman, MySQL, Oracle
Tooling & Delivery	Git, CI/CD, Hilt/Dagger 2, RxJava, FFmpeg, Mixpanel, Adjust, EncryptedSharedPreferences, Agile/Scrum, code review, mentoring

PROFESSIONAL EXPERIENCE

Senior Android Developer
Sep 2026 – Present

OneCash | *Remote*

On Google Play: ONE Cash: Agent and Merchant · ONE Cash: Your Digital Wallet

- Build both ONE Cash apps — the customer wallet and the agent app — and wrote the AI chat SDK that ships inside the customer app.
- Sole author of the OneCash chat SDK: an assistant packaged as a reusable Compose library (AAR / JitPack), embedded in the customer app's home screen.
- Replies stream over an OkHttp WebSocket with auto-reconnect and exponential backoff; messages queue in Room while the socket is down and replay automatically on reconnect.
- Session state held in EncryptedSharedPreferences behind a single-entry facade, with a bilingual Arabic/English interface and full RTL support.
- Customer app: delivered loyalty points end-to-end, from the new home experience and hero module through to points redemption.
- Customer app: built multi-biller payment journeys with dynamic biller forms, checkout and confirmation screens.
- Customer app: added notification events and in-app notification handling, side-menu reporting, favourites and Arabic/English localisation.
- Agent app: cash-in, e-wallet and over-the-counter transfers, refunds, nominated-bank transfers, vouchers, e-cards, Zakat payments and service orders.
- Agent app: extended registration and MSISDN validation to customers outside Yemen, with international country-code selection and per-country number rules.
- Agent app: rebuilt transaction history and details, including refund journeys and request hashing, across a long-lived mixed Java/Kotlin codebase.

Senior Android Developer
Sep 2024 – Sep 2026

myFirst Teach Sdn Bhd | *Johor, Malaysia*

- Owned AI video generation in myFirst Cam: parallel uploads under a concurrency limit, generation brokered through Firestore, a step-based progress UI, and full artefact cleanup when a run fails.
- Built the voiceover pipeline end-to-end — in-app voice note recording, FFmpeg audio mixing of voiceover, music and original track into the generated video, plus playback control and per-track volume.
- Added template-based video rendering on WorkManager, with background scheduling, music download and media preparation so long renders survive backgrounding.
- Enforced per-day generation quotas driven by Firebase Remote Config, so AI cost could be tuned remotely without a release.

- Built the post and create modules from scratch and re-architected their flows inside a 15-module Compose codebase using Hilt, Room and Retrofit.
- Delivered the device setup wizard: software update, date and time, camera naming and device binding over the camera pairing flow.
- Worked across an AI-first platform whose assistant answers questions about a photo, writes illustrated stories and restyles images, backed by on-device ML (Google ML Kit, TensorFlow Lite MobileFaceNet).

Android Developer
May 2019 – Sep 2024

Wave Money (Digital Money Myanmar Limited) | *Yangon, Myanmar*

On Google Play: WavePay

- Acted as domain expert and led the re-architecture of the flagship app into a domain-based, multi-module codebase.
- Delivered the Super App platform by embedding mini-apps, with push notifications, in-app messaging and analytics through Firebase, Mixpanel and Adjust.
- Raised the crash-free rate to 99.5% for 5M users in Firebase Crashlytics through systematic, step-by-step debugging.
- Built native features with Kotlin and MVVM, using Room for local storage and Retrofit for API integration, covered by unit tests.
- Mentored junior developers, led technical brainstorming sessions, and served as technical mentor at Wave Hackathon 2023.

Android Developer (Senior Associate Engineer)
Mar 2019 – May 2019

Frontiir Co., Ltd | *Yangon, Myanmar*

- Led new features from concept to release, driving a significant increase in user engagement and satisfaction.
- Owned Myanmar Net App and Myanmar Cast across a wide range of OS versions and devices, keeping behaviour consistent.
- Created sequence diagrams to communicate screen flow clearly to engineers and stakeholders.

Android Developer (Associate Engineer)
Sep 2017 – Mar 2019

Frontiir Co., Ltd | *Yangon, Myanmar*

App listings: Myanmar Net App — Google Play · Myanmar Cast — Softonic

- Built and maintained Myanmar Net App and Myanmar Cast — the subscriber and internet-TV apps for Myanmar's largest broadband provider — on MVP with Dagger 2 and RxJava.
- Developed native apps with Room, Realm and SQLite, integrating backend APIs through Retrofit and OkHttp.
- Adopted Android Architecture Components (LiveData, ViewModel) to improve app performance and maintainability.
- Added ExoPlayer-based adaptive video streaming, developed a Leanback launcher for TV, and automated UI tests with Espresso.
- Integrated Firebase SDKs for Crashlytics, Remote Config and push notifications.

Android Intern & Field Study
Nov 2016 – Aug 2017

Frontiir Co., Ltd / Myanmar Information Technology Pte, Ltd | *Yangon, Myanmar*

- Built a mobile app with React Native and SQLite over a four-month internship, owning design, UI, logic and implementation with a team of three; earlier built a native Android restaurant app with a team of five during a one-month field study.

EDUCATION

Bachelor of Computer Science in Software Engineering
2012 – 2017

University of Information Technology | *Yangon, Myanmar*

- Coursework in advanced programming, database design, web development, computer networks and IT project management. Final-year machine learning project predicting vehicle crash conditions with Naive Bayes classification, plus a tendering system built in PHP.

CERTIFICATIONS & ACHIEVEMENTS

- Passed the ITPEC (IT Professional Examination Council) exam.
- Team Recognition Award and SDLC (Agile) certificate from Frontiir Co., Ltd; certificates in Android Mobile Application Development, Android Game with Arduino (Basic) and Professional Web Developer (Fairway Technology).
- FinLit Hackathon: built an interest-rate calculation web application in JavaScript with a team of five.
- Young Adult Intermediate Level, British Council; General English (four skills) Pre-Intermediate, RELT.

STRENGTHS & LANGUAGES

Owning features end-to-end · Debugging and root-cause analysis · Mentoring and leadership · Clear technical communication · Adaptability

English (professional working proficiency) · Myanmar (native)
